

- ◆ Stainless Steel Sanitary Pipe Fitting
- ◆ Valve、Pump、Fluid Facility
- ◆ 不锈钢卫生级管件、阀门、泵、流体设备

Applications

The centrifugal pump is manufactured in stainless steel and with a shrouded motor. Its sanitary and cost-efficient design makes it perfect for the dairies, beverages, food-processing, pharmaceutical and fine chemicals industries.

Operating principles

Housed inside the casing, the impeller rotates in conjunction with the pump shaft.

With this arrangement, the impeller blades convey energy to the fluid in the form of kinetic energy and pressure energy.

This pump is not reversible by simple reversal of the direction of rotation. The direction of rotation is clockwise when the pump is viewed from the rear side of the motor.

Design and features

- Casing manufactured with cold-formed plate.
- Open impeller and close impeller manufactured with stainless steel investment casting.
- Mechanical seal according to DIN 2916 L1K.
- Adjustable stainless steel legs.
- Pump designed according to 3A sanitary standards.
- IEC B34 motors, IP 55, F-class insulation, 50HZ

Materials

Parts in contact with pumped media	AISI 316L/AISI304
Other parts	AISI 304
Gaskets (standard)	EPDM (FDA)
Mechanical seal (standard)	C/SIC/EPDM
Inside surface finishing	Ra 0.8 um
Outside surface finishing	Mirror polished

- ◆ Stainless Steel Sanitary Pipe Fitting
- ◆ Valve、Pump、Fluid Facility
- ◆ 不锈钢卫生级管件、阀门、泵、流体设备

Applications

The pump is a sanitary, side-channel, self-priming pump suitable for use in the food-processing, pharmaceutical and chemical industries.

It is specially designed for pumping materials containing air or gas, and it can also be used for negative suction with prior priming as well as with filtration equipment.

It can be used with wine, oil, syrups, volatile products such as alcohol, acetone and other solvents, or with products at temperatures close to boiling point. However, the main use of this pump is for CIP return.

Operating Principles

The impeller is housed between the inlet body and the venturi casing and it rotates in conjunction with the pump shaft. This arrangement, together with pump shaft. This arrangement, together with the rotation of the impeller and arrangement of the side channel, creates a negative pressure inside the inlet body, which generates the suction force of the pump. At the same time, the fluid receives energy in the form of kinetic energy and pressure energy, and this impels it through the impeller casing.

Design and features

- Casing manufactured with cold-formed plate.
- Stainless steel investment casting inlet body and impeller.
- Mechanical seal prevents contacting between the springs and the pumped fluid
- Stainless steel pump support

Materials

Parts in contact with pumped media	AISI-316/304
Other parts	AISI-304
Gaskets (standard)	EPDM (FDA)
Mechanical seal (standard)	C/SiC/EPDM
Internal surface finish	Polished
External surface finish	Sandblast

Options

- Mechanical seal in SiC/SiC
- Gaskets in FPM(Viton) and PTFE
- Inlet & outlet connections: Clamp, Thread, Flange, DIN, SMS, 3A, RJT
